TITLE V MATERNAL & CHILD HEALTH SERVICES BLOCK GRANT
STATE PROFILE FOR FY 2006
[SEC. 506(A)(1)]
STATE: FL

1. State MCH Administration:
(max 2500 characters)

The Department of Health is the agency responsible for the administration of the Title V program in Florida. Maternal and child health responsibilities are divided between Family Health Services (pregnant women and children) and Children's Medical Services (children with special health care needs). The Department of Health administers health programs through its county health departments and Children's Medical Services offices. Healthy Start continues to be our priority maternal and child health initiative in Florida. Healthy Start is designed to ensure access to maternal and child health services to all women and children in Florida. Other efforts to improving maternal and child health include services to substance exposed newborns, Fetal and Infant Mortality Review projects, improving pregnancy outcomes, prenatal smoking cessation, and pregnancy associated mortality review. Services for children with special health care needs include the Early Intervention Program, high risk obstetrical satellite clinics, Regional Perinatal Intensive Care Centers and clinic-based medical and therapeutic care.

b. Infants < 1 year old	66,585
c. Children 1 to 22 years old	206,145
d. CSHCN	64,992
e. Others	212,738

11. Statewide Initiatives and Partnerships:

a. Direct Medical Care and Enabling Services:

(max 2500 characters)

Children's Medical Services Integrated Service Delivery Network - A comprehensive continuum of medical and supporting services to eligible individuals with special health care needs. The system of care is a statewide integrated network of providers that includes local, regional and tertiary care facilities. Providers and families are supported through a case management system that includes nurse case managers, social workers and health care professionals. The service continuum includes prevention, early intervention, primary care and medical and therapeutic care. Child Health Services for Children under 1 - Child Health Services are provided mainly by the County Health Departments and include immunizations, periodic health history and physical examinations, laboratory screening tests for health indicators such as lead and anemia, developmental screening, risk assessment, parent education, accident prevention and substance abuse prevention education. Child Health is funded 100% by Title V.

b. Population-Based Services:

(max 2500 characters)

Pregnancy Associated Mortality Review (PAMR) project - a population-based surveillance and selective case review process that monitors trends in pregnancy associated deaths, and identifies gaps in care and systematic service delivery problems. Fetal and Infant Mortality Review (FIMR) project - a community-based effort to provide quality improvement mechanisms that identify medical, psychosocial, environmental and structural factors that may contribute to fetal and infant deaths. Healthy Start Prenatal Screening - used to identify pregnant women who have an increased risk of pregnancy complications or poor birth outcomes due to environmental, medical, nutritional, or behavioral risk factors. Every pregnant woman is eligible for the screening process. Women at-risk may be eligible for care coordination and other services, based on need and local resources. Healthy Start Infant Screening - used to identify infants who are at increased risk of poor health or adverse development due to environmental, medical, nutritional, or behavioral risk factors. Every infant born in Florida is eligible for the screening process.

c. Infrastructure Building Services:

(max 2500 characters)

Healthy Start Coalitions - There are 32 Healthy Start Coalitions covering 66 of the 67 counties in Florida to ensure local leadership and planning for a system of care, to promote optimum health outcomes for pregnant women and infants. Additional capacity is provided through partnerships with the private sector, the public sector, state government, local government, community alliances, and maternal and child health care providers. Healthy Start Evaluation - The Healthy Start program includes an evaluation component of all Healthy Start services. This includes tracking the number of participants who receive Healthy Start services and comparing these numbers to indicators of improved pregnancy outcomes or infant developmental outcomes such as infant mortality, entry into prenatal care, and the number of sudden infant deaths.

Year: 2004

Field Note:

Actual indicator data are not available. Hospital discharge data available to the Department of Health do not track breastfeeding data. The department uses survey data from Ross Laboratories that indicate the percentage of mothers in Florida who are breastfeeding in the hospital.

Field Name: PM13

Row Name:

Column Name:

Year: 2002

Field Note:

The KidCare program projects that it will be a difficult to contain any further increase in the percentage of children without health insurance. Florida's projected population growth, coupled with a trend towards fewer benefits for many workers in the private sector, is creating greater need that is not being offset by additional funding for child health insurance. For this reason, we are setting objectives that remain steady through 2007.

On this measure, the objective for next year is set higher than the indicator for this year. This is because data for 2002 are provisional and do not reflect all the suicides that may have occurred.

Field Note:

Note: During FY2002, the estimated number of eligible Early Intervention Program infants and toddlers receiving services exceeded the estimate of how many children would be eligible. During FY2002-2003, we estimated an increase of about 5% of children needing services, and we served 95% of those children. Some children's parents choose not to participate, and another proportion are not being found or reported for services.

LIST OF MCH PRIORITY NEEDS

[Sec. 505(a)(5)]

STATE: FL FY: 2006

Your State's 5-year Needs Assessment should identify the need for preventive and primary care services for pregnant women, mothers, and infants; preventive and primary care services for children and services for Children with Special Health Care Needs. With each year's Block Grant application, provide a list (whether or not the priority needs change) of the top maternal and child health needs in your state. Using simple sentence or phrase, list below your State's needs. Examples of such statements are: "To reduce the barriers to the delivery of care for pregnant women, " and "The infant mortality rate for minorities should be reduced."

MCHB will capture annually every State's top 7 to 10 priority needs in an information system for comparison, tracking, and reporting purposes; you must list at least 7 and no more than 10. Note that the numbers listed below are for computer tracking only and are not meant to indicate priority order. If your State wishes to report more than 10 priority needs, list additional priority needs in a note at the form level.

1. Improve preconceptional and interconceptional health and well-being.
2. Decrease racial disparities in maternal and child health outcomes.
3. Increase access to health care for the maternal and child health population, including children with special health care needs.
4. Decrease maternal, infant, and child morbidity.
5. Decrease maternal, infant, and child mortality.
6. Decrease risk factors associated with poor maternal and child health outcomes.
7. Decrease teen pregnancy.
8. Ensure consumer-friendly, culturally competent systems of care.
9. Increase statewide and local data and analysis capacity.
10. Increase awareness of public health preparedness issues unique to the maternal and child health population, including children with special health care needs.

STATE PERFORMANCE AND OUTCOME MEASURE DETAIL SHEET
STATE: FL

SP # 1

PERFORMANCE MEASURE:

The percentage of Part C eligible children receiving service

STATUS:

Active

GOAL

To increase the number of eligible children who receive a service.

DEFINITION

Numerator:

Number of eligible children who receive a service.

Denominator:

Number of children eligible.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

21.5 Clinical preventive services from publicly funded programs

DATA SOURCES AND DATA ISSUES

Department of Health data

SIGNIFICANCE

Increasing the percentage of Part C eligible children receiving a service has a positive effect on the outcome measures related to reducing infant, neonatal, postneonatal and perinatal morbidity.

SP # 3

PERFORMANCE MEASURE:

The percentage of pregnant women reporting domestic violence on the PRAMS survey

STATUS:

Active

GOAL

To increase the percentage of women willing to report the occurrence of domestic violence related assaults during their pregnancy.

DEFINITION

Measure of the number of pregnant women reporting domestic violence.

Numerator:

Number of women who reported that either their husband or partner, a family or other household member other than their husband or partner, a friend, or someone physically abused them during their last pregnancy, after weighting the data. The PRAMS survey over samples for black mothers and low birth weight births. When doing an analysis for the entire Florida population the data is weighted.

Denominator:

Number of pregnant women with enough demographic information to place them in a PRAMS strata.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

7.5 Partner abuse

Reduce physical abuse directed at women by male partners to no more than 27 per 1000 couples.

DATA SOURCES AND DATA ISSUES

Prenatal Risk Assessment Monitoring Survey

SIGNIFICANCE

Family related violence continues to be a national issue that affects every community in the United States. Domestic violence contributes to child abuse, teen dating violence and continues on to support the cycle of domestic violence in adulthood. Domestic related assaults during pregnancy result in perinatal mortality, infant mortality, low birth weight babies and pregnancy associated deaths. Children raised in homes where domestic violence is present are twice as likely to become a victim of child abuse. Screening by health care providers during and after pregnancy assists women to obtain care management and counseling/support services to stop the cycle of violence.

SP # 4

PERFORMANCE MEASURE:

The percentage of subsequent births to teens age 15 to 19

STATUS:

Active

GOAL

To lower the percentage of subsequent births to teens age 15 to 19.

DEFINITION

Numerator:

Numerator: Number of females under 19 with a second or higher order birth in the last five years.

Denominator:

Denominator: Number of live births to females age 15-19 in the calendar year.

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

Objective 5.1

Reduce repeat births among females age 15-19.

DATA SOURCES AND DATA ISSUES

Vital records are the source of data on mother's age and births. Population numbers are determined from Vital Statistics records of teens with a second or higher order birth.

SIGNIFICANCE

DHHS made teen pregnancies a priority goal (a major threat to healthy and productive lives) in their 1997 strategic plan. A second teen birth is associated with the lack of high school completion, inability to work, solidifying the cycle of poverty for young mothers, and creating welfare dependency.

SP # 5

PERFORMANCE MEASURE:

The percentage of women reporting tobacco use during pregnancy

STATUS:

Active

GOAL

To decrease the percentage of women who report tobacco use during pregnancy on the certificate of live birth.

DEFINITION

Numerator:

Number of women who report tobacco use on the certificate of live birth.

Denominator:

Number of births in Florida.

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

3.7 Smoking cessation during pregnancy

Increase smoking cessation during pregnancy so that at least 60 percent of women who are cigarette smokers at the time they become pregnant quit smoking early in pregnancy and maintain abstinence for the remainder of their pregnancy.

DATA SOURCES AND DATA ISSUES

The data source is the Florida Department of Health, Vital Statistics Office. The data is taken directly from the Certificate of Live Birth data.

SIGNIFICANCE

Reducing tobacco use during pregnancy has a positive effect on reducing the infant, neonatal, postneonatal and perinatal mortality rates and on lowering the number of low birth weight deliveries..

SP # 6

PERFORMANCE MEASURE:

The rate per 100,000 of reported cases of perinatal transmission of HIV

STATUS:

Active

GOAL

To prevent perinatal transmission of AIDS.

DEFINITION

Numerator:

The number of children under age 2 who are reported to the Department of Health as having AIDS or HIV infection.

Denominator:

The under 2-year-old population, using Florida Vital Statistics data. Specifically the estimates for less than one year of age were added to one-fourth of the estimated population for 1 to 4-year-olds as presented on page three of the 1996 Florida Vital Statistics Annual Report.

Units: 100000 **Text:** rate per 100,000

HEALTHY PEOPLE 2010 OBJECTIVE

19.14 Clinician counseling to prevent sexually transmitted diseases

Clinician counseling to prevent HIV and other sexually transmitted diseases.

DATA SOURCES AND DATA ISSUES

Florida Department of Health, Vital Statistics Office. Ideal data for this objective would be HIV status of all childbearing women and infants, but that data is not available at this time. Although Florida requires reporting all HIV positive laboratory results to the Department of Health, very few infants are being tested. We do have data on the clients receiving prenatal care in the county health departments, but this is a small portion of the total number of women giving birth in Florida.

SIGNIFICANCE

This measure is very important to evaluate the impact of how well clinicians are communicating to women the importance of being counseled and tested for HIV; and the use of preventive treatment during the prenatal, intrapartum and early infant period to prevent the transmission of HIV. Early intervention can prevent transmission, and knowledge of transmission can make it possible for the infected infant to be treated to prevent more severe morbidity and early death. Early intervention is more cost effective and will improve quality of life.

SP # 7

PERFORMANCE MEASURE:

The rate per 1,000 of hospital discharges due to asthma in children age 0-14

STATUS:

Active

GOAL

To reduce the number of hospitalizations due to asthma in children age 0-14.

DEFINITION

Numerator:

Number of hospital discharges due to asthma in children age 0-14

Denominator:

Total population of children age 0-14

Units: 1000 **Text:** rate per 1,000

HEALTHY PEOPLE 2010 OBJECTIVE

11.1 Asthma hospitalizations

Reduce asthma morbidity among children, as measured by a reduction in asthma hospitalizations to no more than 225 per 100,000 people.

DATA SOURCES AND DATA ISSUES

Hospital discharge data

SIGNIFICANCE

Asthma affects over 100 million people worldwide and creates a burden in health care costs, lost productivity, increased absenteeism from school, and reduced participation in family life. Asthma prevalence is increasing most rapidly among children, especially where urbanization is taking place. Effective asthma management and prevention can prevent costly hospitalizations, and decrease school and work absenteeism.

SP # 8

PERFORMANCE MEASURE:

The percentage of low-income children who access dental care

STATUS:

Active

GOAL

To increase access to dental services for low-income children in order to provide clinical preventive and treatment services needed to improve and maintain oral health.

DEFINITION

Numerator:

Number of children who receive services through Medicaid providers, county health departments and community health centers.

Denominator:

The number of low-income children below 200% of the federal poverty level.

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

13.2 Untreated dental caries

Reduce untreated dental disease to no more than 20 percent among children 6 through 8 and no more than 15 percent among adolescents age 15.

DATA SOURCES AND DATA ISSUES

Data are compiled from annual ad hoc reports provided by the Medicaid program, from county health department data maintained by the Public Health Dental Program, and community health center data extracted from the annual Uniform Data System report.

SIGNIFICANCE

Low-income children are at high risk for dental disease because of the lack of access to professional care. Dental caries is the most common chronic disease of children, but amenable to early intervention. Early dental disease can be reversed and more advanced disease can be treated before it progresses to pain, infection and the need for more expensive intervention.

SP # 9

PERFORMANCE MEASURE:

The percentage of pregnant women screened by Healthy Start

STATUS:

Active

GOAL

To achieve universal screening that will identify pregnant women who are at increased risk for preterm delivery or who are at increased risk for delivering a low birth weight infant.

DEFINITION

Numerator:

Number of screens completed

Denominator:

Number of births for same time period

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

14.5 Low birth weight

Reduce low birth weight to an incidence of no more than 5 percent of live births and very low birth weight to no more than 1 percent of live births.

DATA SOURCES AND DATA ISSUES

The data source is the Florida Department of Health, Vital Statistics Office. In previous years, objectives related to Healthy Start prenatal screening rates have been measured by the percent of women offered the screening. Recent data analysis has focused instead on the number/percent of women actually screened. This number is generated by using the number of births for the same time period as the denominator. This results in a much lower rate, but ultimately the one that shows participation in prenatal risk screening. This denominator used is a proxy for the estimated number of pregnant women because in Florida there is not a data system that captures the actual number of pregnant women. Thus, although this is an imperfect measure, used over time it should provide an indication of improvement or lack of improvement of the prenatal screening rates.

SIGNIFICANCE

The ability to identify high risk pregnant women is critical to the ability to assess and provide interventions to address the identified risk factors and improve pregnancy outcomes. Additionally, the data collected through the prenatal screening process enables the statewide analyses of risk factors for pregnant women in Florida.

SP # 10

PERFORMANCE MEASURE:

The percentage of infants screened by Healthy Start

STATUS:

Active

GOAL

To achieve universal screening that will identify infants who are at increased risk for post-neonatal death.

DEFINITION

Numerator:

Number of screens completed

Denominator:

Number of births for same time period

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

14.1 Infant mortality

Reduce the infant mortality rate to no more than 7 per 1,000 live births.

DATA SOURCES AND DATA ISSUES

The data source is the Florida Department of Health, Vital Statistics Office. The data for the infant screen is taken directly from the Certificate of Live Birth.

SIGNIFICANCE

The ability to identify high-risk infants is critical to the ability to assess and provide interventions to address the identified risk factors and improve outcomes during the first year of life. Additionally, the data collected through the infant screening process enables the statewide analyses of risk factors for infants in Florida.

1. **Section Number:** Health Systems Capacity Indicator #01
Field Name: HSC01
Row Name:
Column Name:
Year: 2002
Field Note:
Data for 2002 are not available. We get hospital discharge data from another agency (AHCA). Because of the large number of hospitals and delays in reporting, data for this indicator is a year behind. We expect data for 2002 next year.
2. **Section Number:** Health Systems Capacity Indicator #03
Field Name: HSC03
Row Name:
Column Name:
Year: 2002
Field Note:
In Florida, infants whose family income is <200% of poverty are eligible for Medicaid, so data on all infants are included in HSCI#02.

NEW STATE PERFORMANCE AND OUTCOME MEASURE DETAIL SHEET
STATE: FL

SP # 1

PERFORMANCE MEASURE:

The percentage of Part C eligible children receiving service

GOAL

To increase the number of eligible children who receive a service.

DEFINITION

Numerator:

Number of eligible children who receive a service.

Denominator:

Number of children eligible.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

21.5 Clinical preventive services from publicly funded programs

DATA SOURCES AND DATA ISSUES

Department of Health data

SIGNIFICANCE

Increasing the percentage of Part C eligible children receiving a service has a positive effect on the outcome measures related to reducing infant, neonatal, postneonatal and perinatal morbidity.

OBJECTIVE

2006	2007	2008	2009	2010
------	------	------	------	------

SP # 2

PERFORMANCE MEASURE:

The percentage of subsequent births to teens age 15 to 19

GOAL

To lower the percentage of subsequent births to teens age 15 to 19.

DEFINITION

Numerator:

Numerator: Number of females under 19 with a second or higher order birth in the last five years.

Denominator:

Denominator: Number of live births to females age 15-19 in the calendar year.

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

Objective 5.1

Reduce repeat births among females age 15-19.

DATA SOURCES AND DATA ISSUES

Vital records are the source of data on mother's age and births. Population numbers are determined from Vital Statistics records of teens with a second or higher order birth.

SIGNIFICANCE

DHHS made teen pregnancies a priority goal (a major threat to healthy and productive lives) in their 1997 strategic plan. A second teen birth is associated with the lack of high school completion, inability to work, solidifying the cycle of poverty for young mothers, and creating welfare dependency.

OBJECTIVE

2006	2007	2008	2009	2010
------	------	------	------	------

SP # 3

PERFORMANCE MEASURE:

The percentage of women reporting tobacco use during pregnancy

GOAL

To decrease the percentage of women who report tobacco use during pregnancy on the certificate of live birth.

DEFINITION

Numerator:

Number of women who report tobacco use on the certificate of live birth.

Denominator:

Number of births in Florida.

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

3.7 Smoking cessation during pregnancy

Increase smoking cessation during pregnancy so that at least 60 percent of women who are cigarette smokers at the time they become pregnant quit smoking early in pregnancy and maintain abstinence for the remainder of their pregnancy.

DATA SOURCES AND DATA ISSUES

The data source is the Florida Department of Health, Vital Statistics Office. The data is taken directly from the Certificate of Live Birth data.

SIGNIFICANCE

Reducing tobacco use during pregnancy has a positive effect on reducing the infant, neonatal, postneonatal and perinatal mortality rates and on lowering the number of low birth weight deliveries..

OBJECTIVE

2006	2007	2008	2009	2010
------	------	------	------	------

SP # 4

PERFORMANCE MEASURE:

The percentage of low-income children who access dental care

GOAL

To increase access to dental services for low-income children in order to provide clinical preventive and treatment services needed to improve and maintain oral health.

DEFINITION

Numerator:

Number of children who receive services through Medicaid providers, county health departments and community health centers.

Denominator:

The number of low-income children below 200% of the federal poverty level.

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

13.2 Untreated dental caries

Reduce untreated dental disease to no more than 20 percent among children 6 through 8 and no more than 15 percent among adolescents age 15.

DATA SOURCES AND DATA ISSUES

Data are compiled from annual ad hoc reports provided by the Medicaid program, from county health department data maintained by the Public Health Dental Program, and community health center data extracted from the annual Uniform Data System report.

SIGNIFICANCE

Low-income children are at high risk for dental disease because of the lack of access to professional care. Dental caries is the most common chronic disease of children, but amenable to early intervention. Early dental disease can be reversed and more advanced disease can be treated before it progresses to pain, infection and the need for more expensive intervention.

OBJECTIVE

2006	2007	2008	2009	2010
------	------	------	------	------

SP # 5

PERFORMANCE MEASURE:

The percentage of pregnant women screened by Healthy Start

GOAL

To achieve universal screening that will identify pregnant women who are at increased risk for preterm delivery or who are at increased risk for delivering a low birth weight infant.

DEFINITION

Numerator:

Number of screens completed

Denominator:

Number of births for same time period

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

14.5 Low birth weight

Reduce low birth weight to an incidence of no more than 5 percent of live births and very low birth weight to no more than 1 percent of live births.

DATA SOURCES AND DATA ISSUES

The data source is the Florida Department of Health, Vital Statistics Office. In previous years, objectives related to Healthy Start prenatal screening rates have been measured by the percent of women offered the screening. Recent data analysis has focused instead on the number/percent of women actually screened. This number is generated by using the number of births for the same time period as the denominator. This results in a much lower rate, but ultimately the one that shows participation in prenatal risk screening. This denominator used is a proxy for the estimated number of pregnant women because in Florida there is not a data system that captures the actual number of pregnant women. Thus, although this is an imperfect measure, used over time it should provide an indication of improvement or lack of improvement of the prenatal screening rates.

SIGNIFICANCE

The ability to identify high risk pregnant women is critical to the ability to assess and provide interventions to address the identified risk factors and improve pregnancy outcomes. Additionally, the data collected through the prenatal screening process enables the statewide analyses of risk factors for pregnant women in Florida.

OBJECTIVE

2006	2007	2008	2009	2010
------	------	------	------	------

SP # 6

PERFORMANCE MEASURE:

The percentage of infants screened by Healthy Start

GOAL

To achieve universal screening that will identify infants who are at increased risk for post-neonatal death.

DEFINITION

Numerator:

Number of screens completed

Denominator:

Number of births for same time period

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

14.1 Infant mortality

Reduce the infant mortality rate to no more than 7 per 1,000 live births.

DATA SOURCES AND DATA ISSUES

The data source is the Florida Department of Health, Vital Statistics Office. The data for the infant screen is taken directly from the Certificate of Live Birth.

SIGNIFICANCE

The ability to identify high-risk infants is critical to the ability to assess and provide interventions to address the identified risk factors and improve outcomes during the first year of life. Additionally, the data collected through the infant screening process enables the statewide analyses of risk factors for infants in Florida.

OBJECTIVE

2006	2007	2008	2009	2010
------	------	------	------	------

SP # 7

PERFORMANCE MEASURE:

The rate per 1,000 of hospital discharges due to asthma in children 0-14

GOAL

To reduce the number of hospitalizations due to asthma in children age 0-14.

DEFINITION

Numerator:

Number of hospital discharges due to asthma in children age 0-14

Denominator:

Total population of children age 0-14

Units: 1000 **Text:** 2

HEALTHY PEOPLE 2010 OBJECTIVE

11.1 Asthma hospitalizations

Reduce asthma morbidity among children, as measured by a reduction in asthma hospitalizations to no more than 225 per 100,000 people.

DATA SOURCES AND DATA ISSUES

Hospital discharge data

SIGNIFICANCE

Asthma affects over 100 million people worldwide and creates a burden in health care costs, lost productivity, increased absenteeism from school, and reduced participation in family life. Asthma prevalence is increasing most rapidly among children, especially where urbanization is taking place. Effective asthma management and prevention can prevent costly hospitalizations, and decrease school and work absenteeism.

OBJECTIVE

2006	2007	2008	2009	2010
------	------	------	------	------

SP # 8

PERFORMANCE MEASURE:

Excess feto-infant mortality attributed to the maternal health/prematurity category in the PPOR statewide analysis.

GOAL

To decrease the excess feto-infant death attributable to maternal health/prematurity.

DEFINITION

Using the Perinatal Periods of Risk Analysis, when compared to a statewide reference group, the excess fetal deaths with gestational ages 24 weeks or greater and fetal and infant deaths with birth weights of 500 grams or greater that are attributable to the maternal health/prematurity category. Units: Difference in excess feto-infant mortality between reference group and non-reference group.

Numerator:

Denominator:

Units: 1000 **Text:** Rate

HEALTHY PEOPLE 2010 OBJECTIVE

Objective 16-1a

Fetal deaths at 20 or more weeks of gestation (Baseline 6.8 in 1997)

Objective 16-1b

Fetal and infant deaths during perinatal period (28 weeks of gestation to 7 days or more after birth) (Baseline 7.5 in 1997)

DATA SOURCES AND DATA ISSUES

Birth records matched to infant death records and fetal death records.

SIGNIFICANCE

Recent perinatal periods of risk analysis have indicated that there is substantial opportunity for improvement in the area of maternal health and prematurity. Preconceptional and interconceptional care for women may result in lower excess rates of feto-infant death attributable to this category.

OBJECTIVE

2006	2007	2008	2009	2010
------	------	------	------	------
